

Recreational Vehicle owners are "Going Green"

Have you ever noticed that more RVer's are going green? And More

and more public and private campgrounds are limiting the use of generators.

Portable generators were once a necessity when boon docking, but with today's modern technology it is now possible for your RV to generate all of its own electrical power!

Environmental and personal health issues are also a concern with portable generators. Small engines produce an abundance of Carbon Monoxide (CO). Just walk by a generator and you'll smell the CO. From 1999 to 2004 there were over 16,000 deaths related to CO poisoning¹. Adults age 65 and older are at the greatest risk¹.

By installing a solar (photovoltaic) electric battery charging system on your RV you can totally eliminate the need for a generator and complying with generator curfews.

¹ Statistic from Center for Disease Control & Prevention.

100% Customer Satisfaction Guarantee

RV Solar Connection, llc guarantees the quality of our craftsmanship 100%.

We take great pride in what we do and feel that our job is not complete until you are totally satisfied with the installation services that we performed for you.

Revised January 3, 2010

RV Solar Connection, llc Installs Solar Systems on all Recreational Vehicles, large or small.

A Solar battery charging system can be installed on any size recreational vehicle. RV Solar Connection, llc has dozens of options for designing a system unique to your RV and your needs.

A 160 Watt Solar System

The owner of this 5th wheel dry camps weekly and never has to worry about battery power.

Benefits of Solar

- Clean environmentally friendly renewable energy source that will produce power for 25 year or more
- No moving parts to wear out
- Never needs maintenance
- Quietly recharges your batteries daily without the use of fossil fuels
- Can be sized to meet your needs or budget
- May be tax deductible if your RV is declared as either your primary or secondary home.

Sample Solar Systems

The 85 Watt Kyocera Solar Maintainer

Kyocera 85 Watt Battery Maintainer

This system includes an 85 Watt Solar Panel, and Solar Charge Controller.
Installed Approximately: \$991.35
3% Discount for cash or check payment

130 Watt Kyocera Solar Charger

Kyocera 130 Watt Charger

This system includes a 130 Watt Solar Panel, and a digital charge controller.
Installed Approximately \$1,204.95 + tax

260 Watt Kyocera Super Charger

This system includes 2 - 130 Watt Solar Panels, digital charge controller and 1800 watt sine wave inverter.
Installed Approximately \$2,754.97

Eliminate Dead Battery Problems while in Storage

Winter storage is hard on deep-cycle batteries. Most summer time battery failures are caused by improper winter storage!

Have you ever gone to pick up your RV from storage and found that your batteries are weak or dead? Most folks who put there RV into storage tend to park it and forget it!

A Solar Battery Charging System from RV Solar Connection, llc will automatically keep your deep-cycle batteries at full charge by gently trickle charging the coaches batteries all winter long.

Never Ending Supply of Electricity!

A solar system sized to meet your electrical needs will give you a never ending supply of clean, renewable 12 volt DC power.

Run as many lights as you want for as long as you want! Run the heater all night long without worries! Convert 12 volt DC to 110 volt AC to run appliances, or microwaves without a generator!
